

INF552: Final Project

The final project involves applying the material taught in class to a challenge problem (such as on Kaggle) or any other problem of your interest. It is for **30** points. Your final project report is due by **5/9, 11:59PM**. No exceptions will be made. Please submit your report and code on **BlackBoard** (do NOT email them to the instructor or the TA). Please include information about all group members and their contributions. Only for the final project, groups can have up to **4** students. There is no particular format required for your report. However, it is preferable that the report resembles a research paper. Here is an example of a research paper that came from the final project of students in the same class taught in a previous semester: <http://idm-lab.org/bib/abstracts/papers/ijcai18d.pdf>
